Home Solutions Construction Surveys

Construction Surveys

When quality and accurate results matter on construction sites.

rmDATA's range of products cover everything needed for successful construction surveys – our geodetic software **rmGEO** supports you **from as-built measurements to mark-outs**. Together with **rmNETZ**, geodetic networks are easily adjusted. Even if network adjustments are not part of your daily work, you will find it easy to navigate through our clearly structured user interface.

Special modules for defining the points of marked-out routes, profiles and volumes cover key aspects of construction surveys. **rmDATA GeoModeller** assists you with **digital terrain models or the calculation of cubatures**. Our state-of-the-art geodetic CAD **rmDATA GeoMapper** makes it easy to draw up plans.

rmDATA software for construction surveys has many advantages: it is easy to use, it provides fast, **accurate and fully documented** results, and it offers users many different interfaces. Saving you time and money is our key objective. That is why the modules and special applications of rmDATA's geodetic software for construction surveys provide our customers with **fully automated secured results**.
